

Place an Order for Outpatient Infusion COVID-19 Therapy in CareLink

External providers are now able to place requests for Covid therapeutics (infusions, injections) in CareLink. These orders route to a centralized workqueue that nurses at UNC will work and contact the patient to schedule.

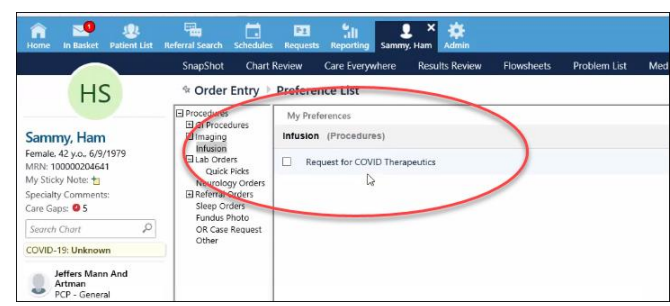

Try It Out

1. From the UNC CareLink main page, click on **Place an Order/Referral**

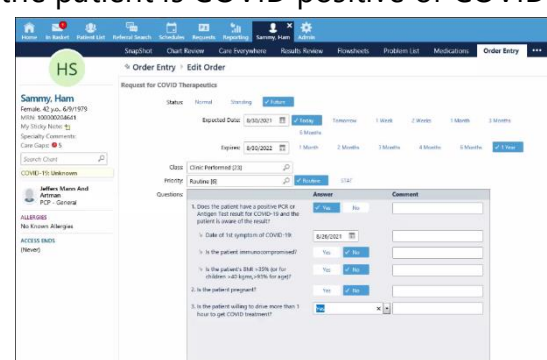

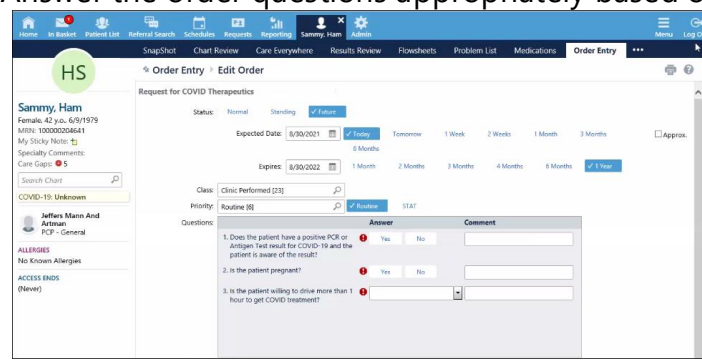

2. Search for your patient. From the **Order Entry/Preference Link** page, search for the **Request for COVID Therapeutics** order.

TIP: The order can be located in the Procedures > Infusion section, or the COVID order entry section

3. Answer the order questions appropriately based on if the patient is COVID positive or COVID exposed.

4. The order will route to a central UNC queue and be scheduled for therapy. If the patient does not receive treatment, the order will be canceled, and the CareLink provider can view the cancellation details in the order report or in order review.
